Reading, UK (open to London)

PROFESSIONAL SUMMARY

CS graduate and automation engineer specialising in full-stack workflow systems. Founded Flow Fusion AI to design and build bespoke automation platforms for businesses: most recently delivering a complete Applicant Tracking and Onboarding system for a London dental clinic (Next.js, Airtable, Make.com) that processed 350+ applicants and saved 15-20 hours per week in manual admin. Strong end-to-end delivery record: requirements scoping, technical build, and client handover, all solo. Targeting automation engineering, solutions engineering, or technical implementation roles in London. Right to work in the UK, no sponsorship required.

CORE COMPETENCIES

Next.js / React

TypeScript

Make.com Automation

n8n Workflows

Airtable

REST APIs & Webhooks

Cal.com Scheduling

Python

End-to-end Solo Delivery

Client Requirements Scoping

Vercel / CI-CD

Agile / SCRUM

EXPERIENCE

Flow Fusion AI

Nov 2024 - Present

Founder & Automation Engineer

Remote, UK (self-employed)

- Designed and delivered a custom **Applicant Tracking System** for a London dental clinic: built with Next.js and Airtable, replacing a fragmented Google Sheets workflow with automated applicant intake, Cal.com interview scheduling, and Gmail/Slack notifications to candidates and hiring managers, saving 15-20 hours per week in manual admin.
- Extended the engagement into a full **Onboarding Task Manager**: used Make.com to automate role-based task assignment (compliance training, video modules, quizzes) triggered at the correct schedule per job role, paired with a self-serve Next.js employee dashboard, eliminating manager blind spots on new hire progress.
- Built a multi-page **Admin Dashboard** consolidating hiring metrics, user management, and task tracking in a single interface, underpinned by layered Make.com automations handling scheduling, status updates, and notifications end-to-end.
- Managed the full client lifecycle: scoped requirements from non-technical stakeholders, translated manual workflows into technical specifications, and guided adoption through to handover.

University of Portsmouth

Oct 2022 - Nov 2022

Web Editorial Assistant

Portsmouth, UK

- Built and maintained webpages using the university CMS platform, ensuring quality and UX standards across published content.
- Worked within a SCRUM team: attended daily standups, communicated progress, and resolved issues collaboratively.

PROJECTS

Applicant Tracking & Onboarding System

Client: Smile Cliniq

Full-stack hiring and onboarding platform for a London dental clinic. Replaced a manual, multi-spreadsheet process with an integrated system: automated applicant intake, Cal.com interview scheduling, Gmail/Slack notifications, role-based onboarding task assignment triggered on hire, and a consolidated admin dashboard. Processed 350+ applicants in production. Built and shipped solo.

Next.js · Airtable · Make.com · Cal.com · Vercel · Gmail API · Slack API · github.com/ManagersSC/onboarding-task-manager

Price Comparison Web App

Final Year Project

Web scraper and comparison UI aggregating live grocery prices across UK supermarkets. Automated data collection, backend processing, and frontend rendering end-to-end. Documented with a full software engineering dissertation covering architecture and methodology.

Python · Flask · Selenium · BeautifulSoup · HTML · SASS · JavaScript

EDUCATION

BSc Computer Science · [University of Portsmouth](#)

Sept 2020 - May 2023

Data structures and algorithms, software engineering practices, OOP (Python, Java), web programming, databases, and the full software development lifecycle.

TECHNICAL SKILLS

Languages: JavaScript (ES2022+), TypeScript, Python, HTML/CSS, SASS

Frameworks: Next.js, React, Flask

Automation: Make.com, n8n, Airtable, Cal.com, Zapier

APIs / Integrations: Gmail API, Slack API, REST APIs, Webhooks

DevOps: Git, GitHub, Vercel, CI/CD pipelines

Methodologies: Agile, SCRUM, end-to-end solo delivery
